

JCI NORTHERN CONFERENCE · GBEDEGU '26 · SKILLS DEVELOPMENT SESSION

AI-Powered Personal Brand & Digital Presence

Godwin Agbane
CEO, Innoedge Technologies

Hawthorn Suites, Abuja · Friday 21 August 2026 · 10:00 AM

Your guide today

Senior engineer — 7+ years

Distributed systems and fintech; national-scale identity infrastructure.

Group CEO, Innoedge Technologies

DapPay, Spendly, ExamPadi and a portfolio of Nigerian tech ventures.

AI-native operator

Runs engineering and business operations daily with AI agents and automation.

Builder, not vendor

Nothing today is sponsored — tools I actually use, free options first.

TODAY'S PROMISE

- A prompt playbook you can use tomorrow
- An AI toolbox mapped to branding, sales, leads and operations
- A personal website you can ship this week — for free
- A 30-day plan to put it all to work

Slides + every link: scan the QR at the end.

Where we're going in the next hour

01

The evolution

How work, communication — and now intelligence — keep shifting.

02

The big four assistants

Claude, ChatGPT, Gemini, Grok — what they cost and which to pick.

03

Prompt engineering

Roles, right vs wrong prompts, and the ladder to agents & workflows.

04

The business toolbox

Branding, content, sales, research, lead gen and automation tools.

05

Build & ship

A personal website built with AI and hosted free — this week.

06

Scale & act

Scaling with AI, free vs paid, and your 30-day action plan.

01

From letters to LLMs

The evolution of work and communication — and why this moment is different.

Every era collapsed distance — and time

The gap that keeps shrinking: idea → audience → income.

Every shift minted new winners

1990s — first businesses online

Owned search results while rivals printed flyers.

2000s — first brands on social

Owned the feed and built audiences for free.

Today — first AI-powered operators

Own speed: more output, more presence, same 24 hours.

The winners weren't the most talented. They adopted earliest and stayed consistent.

58%

of U.S. small businesses used generative AI in 2025 — up from 40% in 2024.

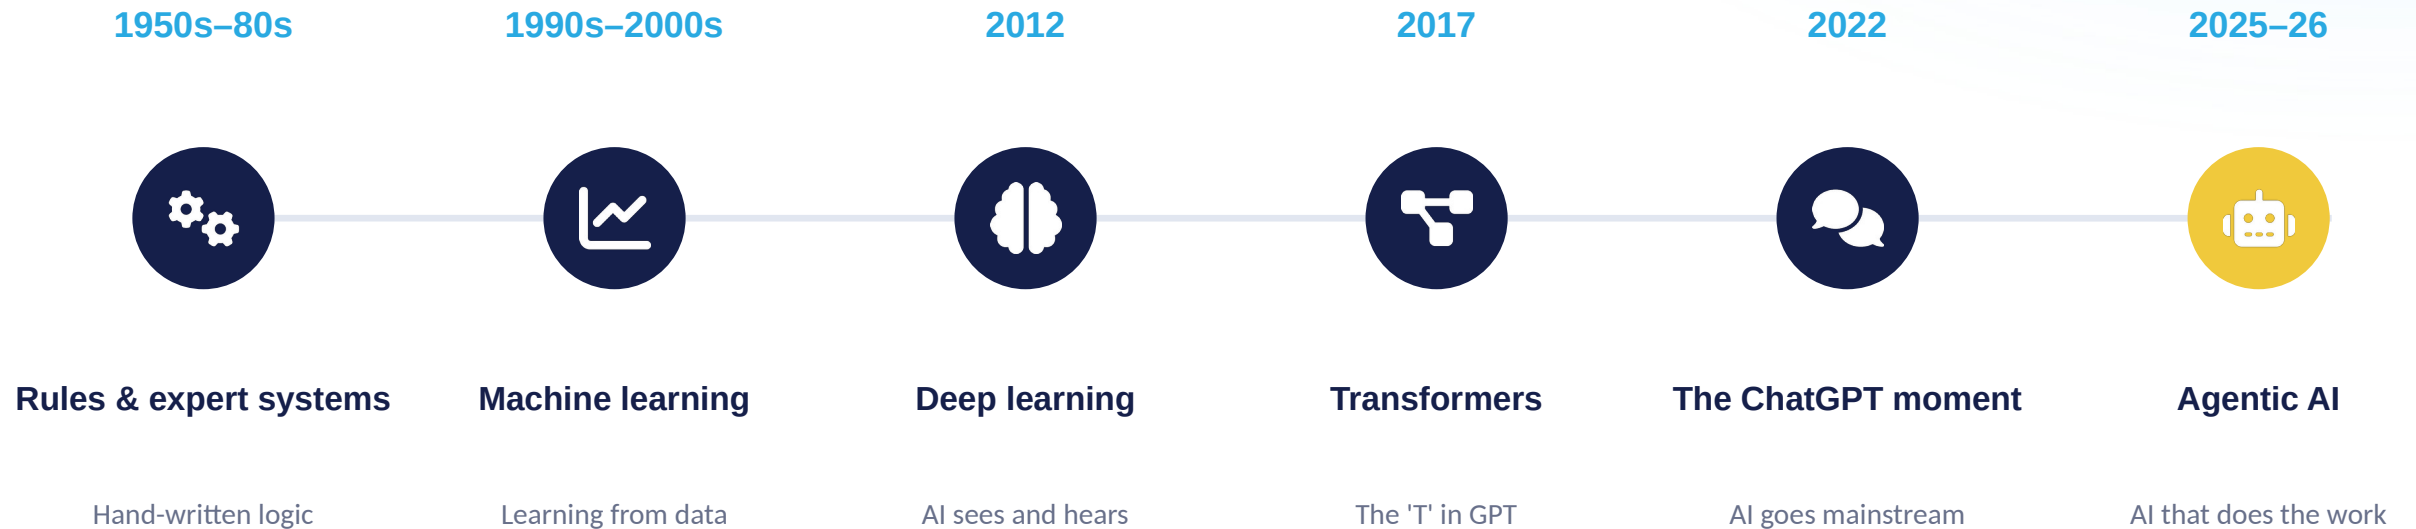

U.S. Chamber of Commerce, 2025

83%

of growing small businesses are already experimenting with AI.

Salesforce SMB Trends Report

AI's journey: from rules to coworkers

70 years to get here. The last 4 changed everything.

2026: AI doesn't just answer — it works

Chatbot → Agent

It no longer just chats. Give it a goal and tools, and it plans, browses, and executes multi-step work.

Answers → Deliverables

Spreadsheets, decks, documents, websites — real files you can send, not text you copy-paste.

Isolated → Connected

AI now plugs into Gmail, WhatsApp, Slack, Notion, your CRM — it works inside your business.

RIGHT HERE IN NIGERIA

Google AI Plus now prices in naira: **₦7,450/month** — Gemini Pro, Veo video, Flow, NotebookLM and 200 GB storage.

Nigerian students: **12 months free** (announced August 2026). Access is solved — the edge now is knowing how to use it.

02

Your AI workforce: the big four

Claude · ChatGPT · Gemini · Grok — what they do, what they cost, which to pick.

The big four at a glance

Claude

Anthropic · Fable 5

- Turns work into real files: Excel, PowerPoint, Word
- Agents: Claude Code & Cowork do multi-step work
- Projects + memory learn your brand voice

Free · Pro \$20 · Max \$100+

ChatGPT

OpenAI · GPT-5.6

- Agent Mode browses, clicks and acts for you
- Custom GPTs — package & share your know-how
- Deep Research writes cited reports

Free · Go ~\$8 · Plus \$20

Gemini

Google · 3.1 Pro

- Lives inside Gmail, Docs, Drive, Meet
- Bundles NotebookLM + Veo video + Flow
- Cheapest paid tier — ₦7,450/mo in Nigeria

Free · Plus \$4.99 · Pro \$19.99

Grok

xAI · Grok 4.5

- Real-time pulse of X — trends as they happen
- DeepSearch for live web research
- Grok Imagine for images & video

Free · X Premium \$8 · SuperGrok \$30

Which one should you pick?

You live in Gmail, Docs & Drive

Start with Gemini — it's already inside your tools, and it's ₦7,450/month here.

You want deliverables & agents

Choose Claude — decks, spreadsheets, documents and multi-step agent work.

You want the biggest ecosystem

Choose ChatGPT — Agent Mode plus thousands of custom GPTs and apps.

Your brand lives on X / real-time

Choose Grok — it reads the timeline as it happens.

Strategy: master ONE paid assistant. Keep the rest on free tiers. Depth beats breadth — its memory learns your business.

Beyond the chat box: features that do real work

Projects & memory

Upload your brand docs once — every chat starts already knowing your business.

Real file creation

Ask for the spreadsheet, the deck, the contract draft — get the actual file.

Deep research

Cited market and competitor reports in minutes, not days.

Agent & computer use

It browses, clicks, fills forms and completes tasks while you watch.

Voice

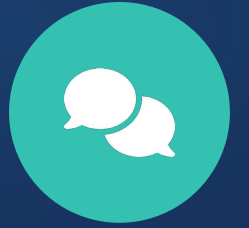

Talk instead of type — meetings, dictation, live translation.

Connectors (MCP)

Plug into Gmail, Slack, Notion, your CRM — AI inside your workflow.

03

Prompt engineering

Talking to AI so it delivers — prompts, roles, and the ladder up to agents and workflows.

Anatomy of a great prompt

R Role

"You are a brand strategist for African SMEs."

C Context

"My audience is young professionals in Abuja; goal is enquiries."

T Task

"Write my Instagram bio and a pinned-post caption."

C Constraints

"150 words, warm but expert tone, no hashtags, no jargon."

E Examples

"Here are two bios I love — match this energy."

I Iterate

"Make option 2 bolder. Now shorten it. Now punchier."

Same tool. Same 30 seconds. Different business.

The prompt most people write

"Write a LinkedIn post about my business."

- Generic — could be anyone's business
- No audience, no goal, no voice
- You'll rewrite it anyway

The prompt that works

"You are a LinkedIn ghostwriter for a Nigerian fintech founder. **[ROLE]**
My audience: young professionals in Abuja. **[CONTEXT]** Write a 150-
word launch post for our payments app — warm, confident, no
hashtags, end with a question. **[TASK + CONSTRAINTS]** Here's a post
whose tone I like: ..." **[EXAMPLE]**

Sounds like you. Ready to post — first try.

Four power moves for better answers

1 · Show examples (few-shot)

Paste 2–3 samples of what ‘good’ looks like. Quality jumps instantly — it copies your taste.

2 · Make it plan first

“Before writing, show me your outline.” Approve the plan, then let it write. Fewer rewrites.

3 · Force the format

“Give me a table / checklist / 3 options ranked.” Structure you can act on, not an essay.

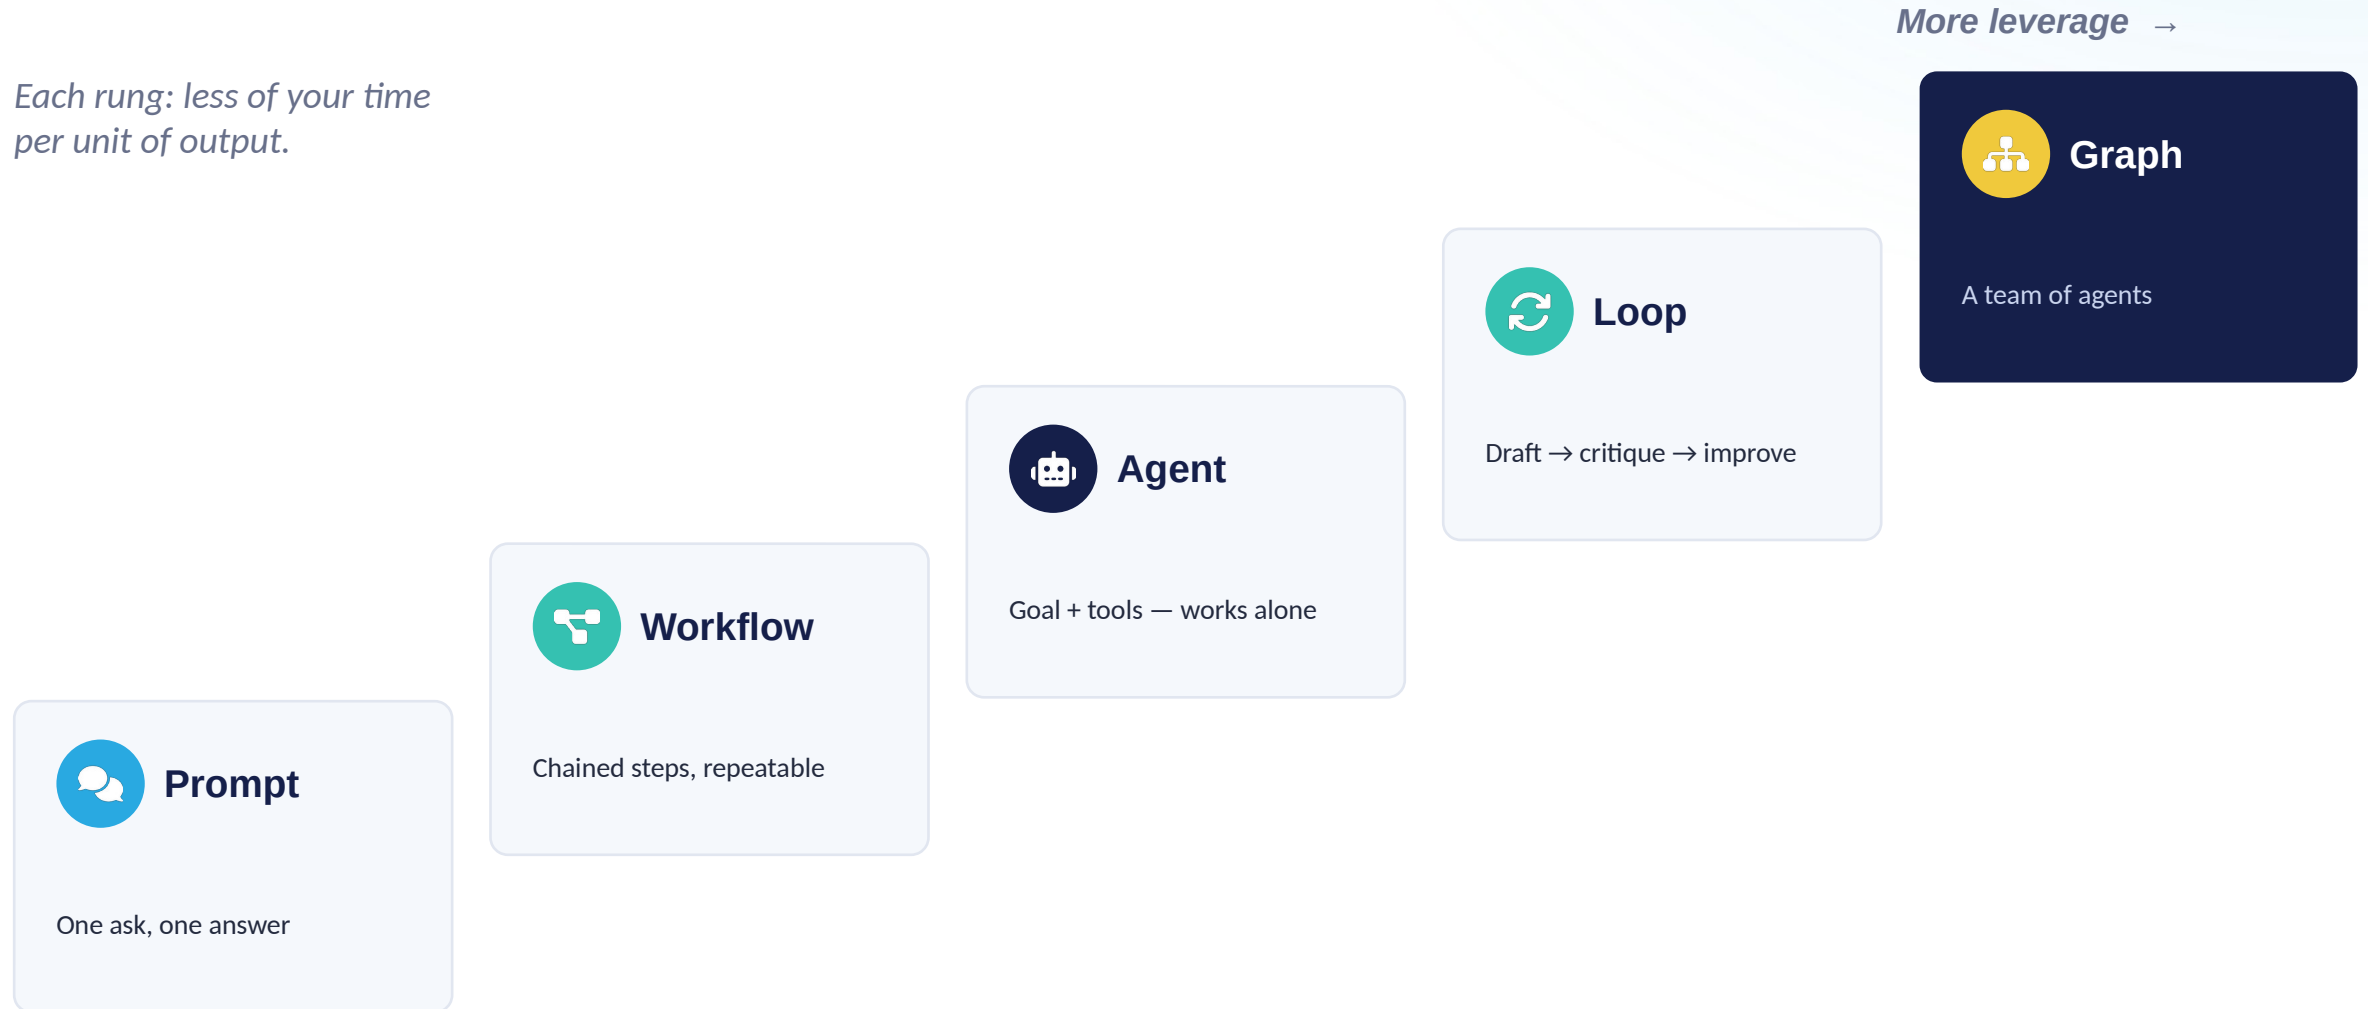

4 · Run a critique loop

“Now critique this draft against my goals — then rewrite it.” Your free in-house editor.

From prompts to systems

*Each rung: less of your time
per unit of output.*

An agent = a goal + tools + permission to work

A goal

"Find 20 corporate event venues in Abuja and compare them."

Tools

Web browsing, spreadsheets, email drafts, your files.

Permission

Clear boundaries: research freely — but I approve anything sent.

*You brief it like a junior staffer.
It reports back like one, too.*

WHAT THAT LOOKS LIKE

- You (5 min): write the brief above
- Agent (30 min): searches, calls up rates, builds the comparison sheet
- Agent: drafts a personalized outreach email per venue
- You (10 min): review, tweak two lines, hit send

A day of admin → 15 minutes of judgment.

Loops and graphs: your invisible team

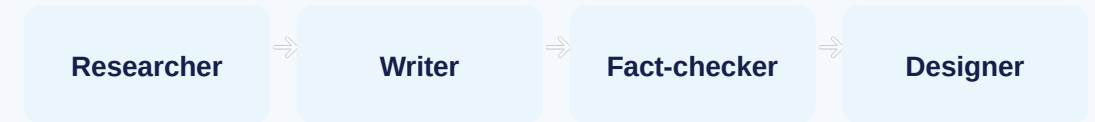

The loop — quality control

- Draft — the writer AI produces version 1
- Critique — a critic AI scores it against YOUR checklist
- Rewrite — fixes what failed
- Repeat — until it passes, then it reaches you

A free quality-control department.

The graph — division of labour

Each agent owns one step and hands off to the next — an org chart made of AI workers, with you as the final approver.

One person, operating like a firm.

Plugins, skills & MCP: AI inside your tools

MCP — the “USB-C of AI”. One open standard that plugs any AI assistant into your business tools. Created by Anthropic, now adopted across the industry.

Gmail

Google Drive

Slack

Notion

GitHub

Stripe

HubSpot

Shopify

Claude Skills & plugins

Teach it your repeatable jobs — branded decks, weekly reports, invoice formats — once. It does them your way, forever.

ChatGPT GPTs & apps

Package your instructions and knowledge into a mini-app. Use it, share it with your team — or sell your expertise.

04

The business toolbox

Branding · content · sales & research · lead generation · workflow automation.

Look professional from day one

Pomelli — by Google Labs

FREE (BETA)

Reads your website → builds your “Business DNA” → generates on-brand social campaigns.

Canva Magic Studio

FREE · PRO \$18

Magic Write, Magic Design, background removal — the everything design studio.

Looka

FROM \$20 ONCE

AI logo and complete brand kit — colours, fonts, cards — in minutes.

Adobe Express + Firefly

FREE · \$9.99

Pro-grade templates plus generative images, safe for commercial use.

Pomelli: your brand team in three steps

1 · Paste your website

Give Pomelli your site or social page URL — that's the whole setup.

2 · It learns your DNA

Colours, fonts, tone of voice, imagery — extracted into a “Business DNA” profile.

3 · Generate campaigns

Editable, on-brand posts for Instagram, Facebook, LinkedIn and X — download and publish.

Free while in beta · rolled out to 170+ countries in 2026 · labs.google/pomelli

Honest caveat: it creates the assets — you still download and post them yourself.

One idea → content everywhere

Gamma

Decks, docs and one-page sites from a prompt.

Free 400 credits · Plus \$9/mo

Opus Clip

One long video → a week of short clips, auto-captioned.

Free 60 min/mo · from \$15

HeyGen

Your AI avatar presents any script, on camera, in minutes.

3 free videos/mo · from \$29

ElevenLabs

Studio voiceovers — including a clone of your own voice.

Free tier · from \$6/mo

Buffer

Schedule everywhere, with an AI assistant for captions.

Free plan · ~\$6/channel

Google Flow: a film studio in your browser

What it does

- Text or photos → cinematic video, powered by Veo 3.1
- Scene-builder timeline: string clips into a real ad
- Camera moves, styles, and consistent characters
- Runs on credits included in Google AI plans

Product ads · event recaps · brand stories — without a camera crew.

THE NIGERIA MATH

₦7,450 / month

- Flow + Veo 3 Fast video credits
- Gemini Pro + NotebookLM upgrades
- 200 GB storage
- Students: 12 months FREE (Aug 2026)

Less than one billboard day — for a video department.

Know your market. Find your buyers.

Perplexity

Research with citations — market scans and competitor checks you can trust.

Free · Pro \$20/mo

NotebookLM

Feed it your documents; ask anything — it even makes a podcast of them.

Free (in ₦7,450 plan)

Apollo.io

275M+ B2B contacts, filters, and automated outreach sequences.

Free tier · from \$49

Clay

Enriches and personalizes lead lists at scale — growth-team grade.

Free credits · from \$185

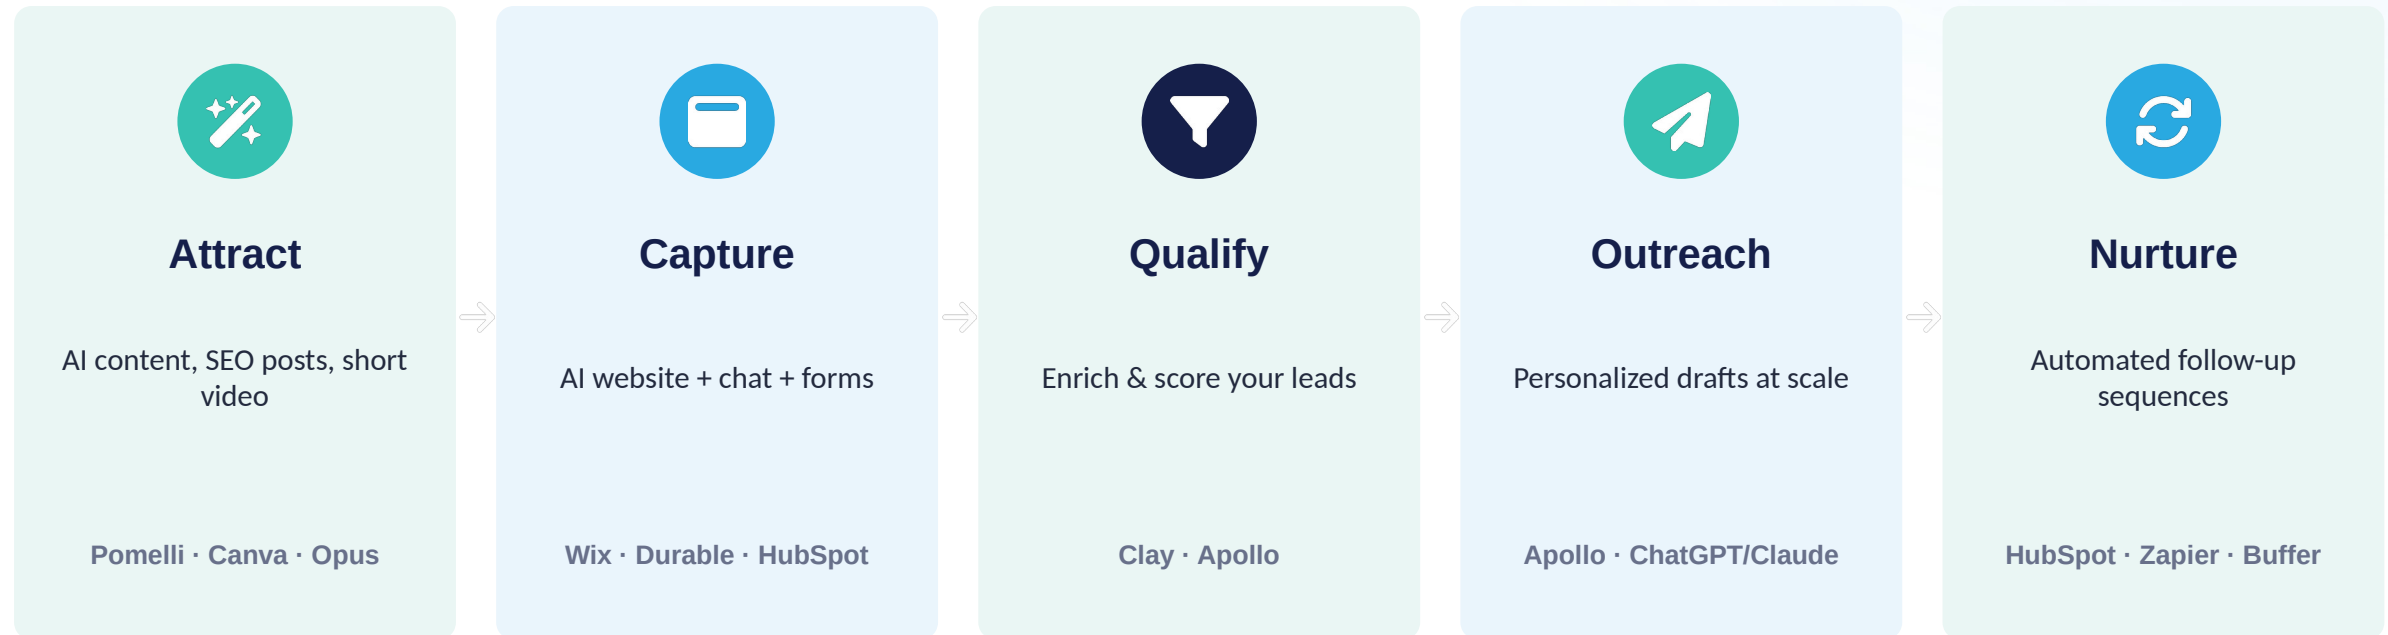

HubSpot + Breeze

A genuinely free CRM with an AI copilot built in.

Free CRM · AI add-ons

An AI-assisted pipeline, end to end

You don't need a marketing team. You need a system — and a human eye before anything sends.

“When X happens, AI does Y” — while you sleep

Zapier

8,000+ apps. Describe the workflow in plain English — it builds it. Agents included.

Free plan · from \$20/mo

Make

Visual drag-and-drop scenarios — see your whole workflow as a map.

Free tier · from \$9/mo

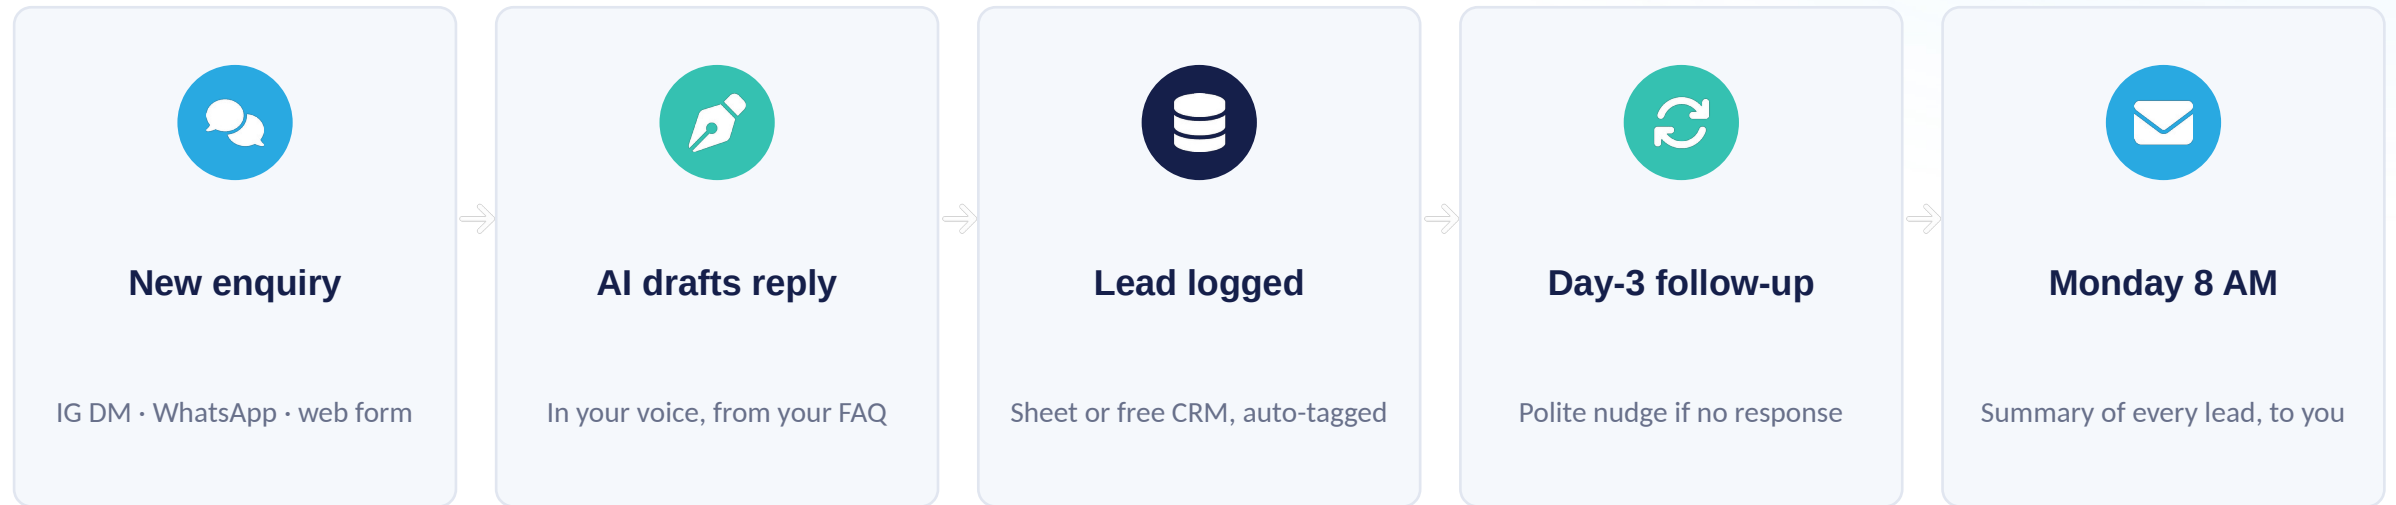

n8n

Open source. Self-host it free, AI-native nodes, no per-task fees.

Self-host ~~¥0~~ · cloud \$20

The formula: Trigger (new lead, new DM, new order) → AI step (draft, summarize, decide) → Action (reply, log, notify you).

A lead machine you could build this weekend

Runs 24/7. Costs ~~£0~~–\$20/month. Your job shrinks to one thing: review and approve. AI drafts — you decide.

05

Build it tonight

Your personal website — designed by AI, hosted free, live before the weekend ends.

Two roads to a website — both start with a sentence

No-code lane — easiest

Durable — full business site in ~30 seconds (publish from ~\$12/mo)

Wix AI — chat your site into existence (free with Wix branding)

Framer — designer-grade polish (free on a framer subdomain)

Lovable — full apps with payments & login, zero code (free · \$25)

Best if you never want to see code.

Vibe-code lane — free-est

Claude / ChatGPT — describe it, get a complete one-file website, free

v0 by Vercel — prompt-to-app for the technical (free tier)

Bolt.new — full-stack apps in the browser (free tier)

Your edge — total control, ₦0, and you learn as you go

Best if you want it free and fully yours.

Live on the internet in four steps — for ₦0

1 • Prompt it

“One-page personal brand site: my name, services, testimonials, WhatsApp contact. Navy & teal, mobile-first, single HTML file.”

2 • Iterate

“Bolder hero.” “Add my photo.” “Make the buttons teal.” Plain English until it feels like you.

3 • Host free

Vercel • Netlify • Cloudflare Pages • GitHub Pages — free tiers cover a personal site with ease.

4 • Domain (optional)

\$5–12/year for .me or .com.ng. Until then, the free subdomain works fine.

Total cost: ₦0 — plus a domain only if you want one.

Your AI personal-brand stack

A home base you own

Your own website + link hub — AI-built, free-hosted. No algorithm can take it away.

A LinkedIn that sells you

Headline, About, Featured — AI-drafted, you-edited. It's where clients check first.

A content engine

One substantial piece a week → AI turns it into posts, clips, captions, a newsletter.

One visual identity

Same palette, fonts and tone everywhere — your brand kit makes it automatic.

One person + AI = a small firm

Delegate the repetitive

Automations answer, log, remind and report — 24/7, no salary.

Multiply your content

One idea becomes a post, a clip, a carousel, a newsletter — same day.

Hire agents as junior staff

Research, first drafts, data entry, QA — briefed like interns, reviewed like interns.

Systemize your best work

Your winning prompts become SOPs — skills your whole team (and AI) reuses.

The guardrail: humans stay on money, legal, and anything public. AI drafts — you approve.

Start free. Pay only when it pays you.

The ~~N~~0 stack (yes, really)

- Claude / ChatGPT / Gemini / Grok — free tiers
- Pomelli (beta) + Canva + Wix free plans
- NotebookLM + Perplexity for research
- HubSpot free CRM + Buffer free plan
- n8n self-hosted + free hosting (Vercel, GitHub)

Pay when you pass a test

Test 1: you hit the free limit every week

Test 2: it saves you 2+ hours a month

Test 3: it directly touches revenue

First upgrades: one assistant (₦7,450–\$20) → Canva Pro → your domain

Tools don't build brands — consistency does. Buy the tool the day it removes a bottleneck, not before.

Your next 30 days

Week 1 · Foundations

- ✓ Pick ONE assistant
- ✓ Save 5 role prompts for your business
- ✓ Run your brand through Pomelli / Canva

Week 2 · Presence

- ✓ LinkedIn overhaul — AI drafts, you edit
- ✓ Same name, bio & handle everywhere
- ✓ First AI-assisted post goes out

Week 3 · Ship

- ✓ Build your site with AI
- ✓ Host it free — go live
- ✓ QR code on your card & flyers

Week 4 · Systems

- ✓ Automate one workflow
- ✓ Start the weekly content engine
- ✓ Review: what saved time? Double down

If you remember five things

- 1 Every era rewards early adapters — with AI, you are still early.
- 2 Prompt like a manager: role, context, constraints, examples, iterate.
- 3 One paid assistant, mastered, beats ten tabs of tools.
- 4 Agents and automations are staff — brief them well, review their work.

- 5 **Ship something this week: a site, a post, a workflow. Momentum beats perfection.**
